How to Choose Cheat Sheet Format

- **Determine the subject where to use the sheet for.** An example, if you're finding a guide for math, it would be helpful to find one that has a list of formulas, depending on the math topic you are working on. So with that, find a geometry sheet if you're working with angles, planes and shapes. And then, look for one with calculus formulas if you are working on a homework involving it.
- **Look for a cheat sheet that is very easy to understand.** It has to have a good layout and it shouldn't be cluttered. Choose one that is well-formatted, specifically with bullets or numbers, something like an easy scanning or reading to avoid hurting your eyes in the process.
- **Find one that uses the same exact terms or phrases, or perhaps, keywords that have to do with your subject.** For example, math is a broad topic. You don't find a cheat sheet format sample meant for fractions if you're looking for solutions on decimal problems. You get the point. Choose a specific cheat sheet that has to do with the specific subject you're trying to work on or problems you're looking to solve.
- **It is also easy to understand that you got to find a well-designed cheat sheet or guide that has the most updated terms for the industry.** For example, a resume guide has to have the most recent updates in the job application world. What had worked yesterday may not apply now. For example, they've been saying that a resume objective is obsolete and that it has been replaced by a career summary or highlights.
- **Now when it comes to accuracy, it also proves very important.** For example, computer or technical industries relating to software development or management must not only be updated but they must be accurate, especially when dealing with commands or codes. That's very important to look up for a great source of technical and computer related cheat sheets that are not only to date but are also correct.
